### **Footnotes:**

- a) The listed prohibition does not apply to metalworking agents for use in controlled closed systems where the washing liquid is recycled or incinerated.
- b) Wastewater Treatment Plant
- c) Benzidine and Benzidine Dihydrochloride are prohibited at any concentration if intentionally added at any concentration for the Canadian market. Benzidine or its salts are prohibited above 0.002% for all other markets. Note: "Intentionally added" means all substances directly added to the formulation.
- d) Suppliers must self-certify compliance using a testing certification agency as specified in the California Implementing Regulation CCR Title 22, Chapter 30 Secs 66387.1-66387.9 available at [https://govt.westlaw.com/calregs/Browse/Home/California/CaliforniaCodeofRegulations?guid=I308280BB8C7640388F102D954F3D6CB2&originationContext=documenttoc&transitionType=Default&contextData=\(sc.Default\)](https://govt.westlaw.com/calregs/Browse/Home/California/CaliforniaCodeofRegulations?guid=I308280BB8C7640388F102D954F3D6CB2&originationContext=documenttoc&transitionType=Default&contextData=(sc.Default)) and/or the Washington State Brake Friction Law Chapter 70.285 RCW; Implementing Rule Chapter 173-901 WAC available at <https://fortress.wa.gov/ecy/publications/documents/1204027.pdf> (see WAC 173-901-060).
- e) The listed Petroleum mineral oil base stocks in lubricants are prohibited for supply to the general public if total extractable polyaromatic hydrocarbon content is  $\geq 3\%$  as measured by Institute of Petroleum standard IP346 (a.k.a. EI346). Included substances are given a threshold of 0% to allow Ford a means to identify affected products and determine total PAH level.
- f) See <http://www.chemicalsubstanceschimiques.gc.ca/plan/approach-approche/index-eng.php> for CAS #s requiring declaration at any concentration in both IMDS for dimensional materials (hard-parts) and COVISINT – GMAP-e1291 for non-dimensional materials (chemicals) to allow Ford to meet applicable reporting requirements. Declaration is required for all listed substances.
- g) Declaration required at any concentration above detection limits where testing has been performed. No additional testing required, however reasonable and expected declaration from sub-suppliers to main suppliers is expected where supplier has knowledge of its remaining presence in their final product.
- h) Consistent with the Canadian Chemical Challenge regulations, Ford requires declaration at any concentration to all substances listed in footnote-f above in both IMDS (hard-parts) and COVISINT (non-dimensional chemicals) where it is reasonable to expect that the supplier has knowledge of its remaining presence in their final product (no testing is required). NOTE: GADSL lists only a subset of the Canadian Chemical Challenge substances that are suspected to be found in automotive hard parts. See the GADSL list at <http://www.gadsl.org/> for subset listing. Ford requirements for establishing compliance are greater than those of GADSL and require declaration for all Canadian Chemical Challenge substances at any concentration intentionally added or otherwise. Hard-part suppliers must review the entire Canadian Chemical Challenge list found in footnote (f), and if any substance is known to remain on the hard-part after manufacture, must declare the substance in IMDS. The GADSL list and thresholds with regard to the Canadian Chemical Challenge substances should be considered as a sub-set of the full requirement, and only be used as a reference, when reporting for purposes of sale to Ford.
- i) If intentionally added at any concentration.  
"Intentionally added" means all substances directly added to the formulation.  
"Incidental presence" means a residual, a trace contaminant or impurity that was not intentionally added to the formulation.
- j) See regulations TRGS 611: Restrictions on the use of water-miscible or water-mixed cooling lubricants whose use can result in the formation of N-nitrosamines (<https://www.baua.de/EN/Service/Legislative-texts-and-technical-rules/Rules/TRGS/TRGS-611.html>) and TRGS 615: Restrictions on the use of anticorrosion agents whose use can lead to the formation of N-nitrosamines for classes of nitrosating agents (<https://www.baua.de/DE/Angebote/Rechtstexte-und-Technische-Regeln/Regelwerk/TRGS/TRGS-615.html>).

## Footnotes:

- k) Short chain chlorinated alkanes (SCCA) are defined using the most restrictive of global regulatory requirements and are defined by the following broad equation:  $C_nH_xCl_{(2n+2-x)}$  where  $n = 10$  to  $13$ .  $x$  is not bounded. This includes all alkanes (n-, -iso, aromatic).  
-Mid-chain chlorinated alkanes (MCCA) are defined as having carbon chain length C14 to C17.  
-Long-chain chlorinated alkanes (LCCA) are defined as alkanes/alkenes having carbon chain length C18-C20.  
-Very Long-chain chlorinated alkanes (vLCCA) are defined as alkanes/alkenes having carbon chain length greater than C20.  
Both non-dimensional and dimensional products containing medium, long, very long, or unspecified chain chloro-alkanes require documentation that their presence does not cause exceedance of the SCCA threshold of 0% by weight. To have these products accepted, you must provide a letter to Ford affirming that these substances do not contain SCCAs.
- l) See SR 814.81 Chemical Risk Reduction Ordinance (<https://www.admin.ch/opc/en/classified-compilation/20021520/index.html>) for products defined as cleaning products in the regulation.
- m) A maximum value of 0.1% by weight, of Hexavalent Chromium, per homogenous material is allowed. For coated products, this percentage is based on the weight of any coating containing Hexavalent Chromium, not the part weight.
- n) Exceedance to threshold limits for select products requires permits, see: [http://www.ec.gc.ca/toxiques-toxics/7A9E5803-0737-408A-97D9-5C7997127128/2be\\_Permit\\_Ap\\_Frm\\_e.pdf](http://www.ec.gc.ca/toxiques-toxics/7A9E5803-0737-408A-97D9-5C7997127128/2be_Permit_Ap_Frm_e.pdf). Manufacture, sale or import of products containing 2-butoxyethanol above thresholds listed in Schedule I is prohibited unless: 1) the product is diluted before use so that the 2-butoxyethanol levels are below the thresholds set in Schedule 1; OR 2) a permit has been issued. See <http://laws-lois.justice.gc.ca/eng/regulations/SOR-2006-347/page-1.html>
- o) Paints, other than spray paints, containing DEGBE in a concentration of 3% or more by mass and intended for supply to the general public must be labelled as follows: "Do not use in paint spraying equipment."
- p) Products in countries without regulations modeled after EU-REACH could be considered for extended phase out timing at the discretion of Ford Material Compliance.
- q) The allowable lead concentration is based on the weight of the total non-volatile content of the paint or weight of the dried paint film.
- r) The prohibition is not applicable to equipment intended to cool products to temperatures below -50 °C.
- s) The supplier must ensure that Ford, as the recipient of the substance(s) or mixture(s) containing one or more of these substances above 0.1%, is provided with information on the requirements referred to in REACH Annex XVII, Entry 74, point (b) of paragraph 1 and the following statement is placed on the packaging, in a manner that is visibly distinct from the rest of the label information: "As from 24 August 2023 adequate training is required before industrial or professional use". After 24 August 2023, the supplier shall meet the labeling requirements as of 24 February 2022 and shall supply Ford with training materials and courses that cover the elements specified in REACH Annex XVII, Entry 74, paragraphs 4 and 5 in the official language(s) of the Member States where the products are supplied.
- t) Nickel Substances are not prohibited per se but are subject to a Nickel release rate threshold of 0.5 ug/cm<sup>2</sup>/week as noted in the subsection header. Individual substances are listed with a threshold of 0% to help Ford identify affected products.
- u) If intentionally added at 0.003% for interior vehicle use, or 0.006% for exterior vehicle use.
- v) All listed substances must be declared at the detection limit for the substance based on standardized testing methodologies.
- w) See <http://www.endangeredearth.com/endangered-species-laws-u/> for a list of endangered species regulations by country.
- x) Allowable benzene levels in fuel are subject to regional regulations such as EU-D 98/70/EC.
- y) Except when required to meet national safety standards.

## Footnotes:

- z) Per EU REACH Annex XVII, Entry 72 and Appendix 12, threshold is expressed as metal that can be extracted from the material.
- aa) The nickel release rate shall be determined by test method BS EN 1811:2011 +A1:2015. The method can be obtained at <http://shop.bsigroup.com/ProductDetail/?pid=000000000030316120>

- dd) An exemption to this restriction for DEHP exists for non-vehicle rubber components of engine systems; this exemption is in effect until 7 January 2024. Until that time DEHP is allowed at (a) 30% by weight of the rubber for gasket coatings, solid rubber gaskets and rubber components included in assemblies of at least three components using electrical, mechanical or hydraulic energy to do work, and attached to the engine, and (b) at 10% by weight of the rubber for rubber-containing components not referred to in point (a).
- ee) The listed substances are prohibited individually or in any combination at the level noted in the subsection header row. Each individual substance is given a threshold of 0% to help Ford identify affected products.
- ff) This substance is impacted by a Canadian Significant New Activity (SNAc). To determine applicable volume thresholds, concentrations and/or applications affected, please review the Canada Gazette notice by entering the CAS# at <https://pollution-waste.canada.ca/substances-search/Substance?>
- gg) EN 16143:2013 should be used for demonstrating conformity with the limits per EU-R 2015/326. Each individual substance is given a threshold of 0% to help Ford identify affected products.
- hh) Exemptions for lead use are specified in RoHS Recast Annex III EU-D 2011/65 and the and the CURRENT ELV Annex II [EU-D 2000/53] and its amendments (<https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:02000L0053-20200306&from=EN>). Once the ELV Annex II exemption expiration date passes the prohibition is effective immediately regardless of vehicle/type approval date. Other exemptions may apply at the discretion of Ford Material Compliance - contact [cschafer7@ford.com](mailto:cschafer7@ford.com).
- ii) Identified substances may not specifically be listed under every legal driver provided.
- jj) All products, including scrap metal contaminants: Radioactivity should meet "Unconditional Use Clearance Level" requirements consistent with International Atomic Energy Agency (IAEA) and the Commission of European Communities (CEC) standards for individual radionuclides IAEA-TECDOC-855 (1996) & Safety Series RS-G-1.7 (2004) (See RSMS Section 3.1.11). Radioactive sources used in manufacturing processes are exempted if they meet exemption levels. Exempted sources typically include small sources of radiation such as tracers used in research, calibration sources and some consumer products containing small sources or low levels of activity per unit mass. The corresponding levels of activity or activity concentration are called exemption levels.

- yy) Declarable substance categories with no listed legal driver are used to capture chemicals that are of the same chemical family as those currently regulated, but that may be subject to future regulation, have pending regulation, or are members of other categories but defined by the listed chemical category.
- zz) Unless an RSL section/subsection is noted as "Select CAS", substances not listed may still be subject to listed legal driver(s) based on the chemical category definition. It is the responsibility of the supplier to confirm that any substances in products provided to Ford are not directly listed in the RSL (and subsequently restricted) and do not meet the category definition as defined in the legal driver and therefore also restricted. For informational purposes only, a listing of PFAS substances specified by a global regulatory or technical body are provided as a separate list.
- aaa) The regulatory drivers specified in the Legal requirements / regulations column for each section/subsection reflect the rationale for the inclusion of the section in the RSL. - ccc) Regulatory ref: Significant New Activity (SNAc) Notices and associated New Substance Notification Requirements (NSNR).  
Applicability: All\* non-dimensional materials, and any dimensional materials (articles/parts) that can disperse matter during use, import, or processing (including manufacturing), that are: 1) destined for use in Canada, or 2) whose destination is unspecified or unknown at time of chemical disclosure, or 3) that are determined by Ford to be uncontrolled are included in the prohibition in affected applications in North America.  
\*Clarification: Non-dimensional fluids or particulate matter that remain contained within a manufactured item during normal use, or whose normal release of fluid or particulate matter is controlled and non-dispersive and is specific to the end use of the item (e.g., lubricants in motor vehicles are released within the engine but remains within the vehicle until replaced), are not included in the prohibition. In contrast, for example, substances in brake pads which are considered dispersive during use would be included in the prohibition if listed as an affected application.
